

1. Extract the zipped folder
2. There will be 2 folders: src and data. src contains the code file and models while the data file contains graphs and dataset for the code
3. Inside src folder, open disaster_svm_logreg_classification.ipynb
4. (optional) Run all the cells to get the result
5. At the end of the code file, there is a commented cell to save the model if necessary
6. To find explanations and more information, feel free to open the pdf document
